

Pitch Board:

Portfolio

Hello, I am Zach Dubay and I am intruiged by technology and how it is used in our everyday lives.

I am currently a senior at Michigan State University studying Media and Information. More specifically, I am focused on human centered technology and design. My main goal is to make technology easier to use for everyone, all ages and backgrounds. I have slight experience in various programming languages including: Python, C++, HTML, CSS and JavaScript. My true passion includes user interaction and experience design, though I enjoy a little coding on the side.

UI Design Recruiter

A recruiter looking for new hires in the field of user interactive design.

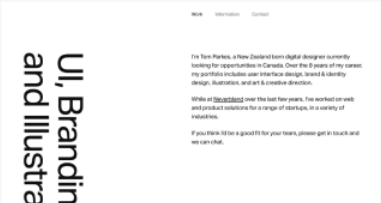

Frontend Recruiter

A recruiter looking for new hires in the field of frontend development.

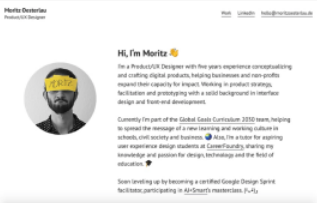

Students

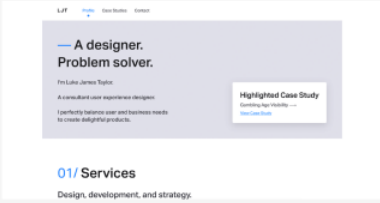

Similar focused students looking for inspiration for their own portfolio

FitKeeper is a high-fidelity prototype of a nutrient tracking mobile app. While working on FitKeeper, I focused on the layout and design elements seen on each possible screen. While working on this project, I learned the process of user interface design and what it entails. I enjoyed toying around which individual icons and finding my aesthetic.

Bam's Boothies is a business proposal for a subscription based service. The business would offer healthy and pre-packaged smoothie ingredients, delivered to your doorstep. Food delivery services are growing very quickly and it would be a good time to tap into that market. Will working on the proposal, I created accounts on Facebook and Twitter to publicize the idea for the company. This included making posts regarding our products as well as creating Facebook advertisements.

Throughout my experience with programming languages, one language I found to be quite unique was JavaScript. This was the first programming language that I have ever had experience with, inside of a web browser. I decided to replicate the famous arcade game, Breakout, with my own code. I enjoyed this project because it gave me more experience with creating and altering elements in JavaScript.

I grew up in a pretty small town in Michigan, called Essexville, where I attended Garber High School. This is where I discovered my love for technology while participating in the FIRST Robotics program. Other than technology I have big interests in music, art, and watching professional soccer. When I am allowed the time, I enjoy visiting Northern Michigan and experienceing everything our great state has to offer. Currently, I am a senior studying Media and Information at Michigan State University. Within the program, my focus is human centered technology and design. My goal is to make technology easier for all users.
